

1. Clone the Project Repository

Open the Command Prompt (cmd) or PowerShell.

Navigate to the directory where you want to clone the project.

Run the following command to clone the repository:

```
bash
Copy code
git clone [repository_url]
Replace [repository_url] with the actual URL of the project repository.
```

2. Install Project Dependencies

Navigate to the project directory:

```
bash
Copy code
cd path\to\your\project
Install the required Node.js packages:
```

```
bash
Copy code
npm install
```

3. Set Up MySQL Database

Start MySQL Server: Ensure that your MySQL server is running.

Create the Database and Import Data:

Open MySQL Command Line Client or a MySQL GUI tool like MySQL Workbench.

Create a new database:

```
sql
Copy code
CREATE DATABASE my_database;
Use the new database:
```

```
sql
Copy code
USE my_database;
Import the provided SQL file (assuming the file is named quiz_dbase.sql and located in the
project directory):
```

```
bash
Copy code
mysql -u your_username -p my_database < path\to\your\project\quiz_dbase.sql
Replace your_username with your MySQL username and path\to\your\project with the
actual path.
```

4. Configure the Project

Open the server.js file in a text editor.

Update the MySQL connection details in server.js to match your MySQL setup:

```
javascript
Copy code
const connection = mysql.createConnection({
  host: 'localhost',
  user: 'your_username',
```

```
    password: 'your_password',  
    database: 'my_database'  
});
```

5. Run the Project

In the project directory, start the server:

```
bash
```

Copy code

```
node server.js
```

Open a web browser and navigate to:

```
url
```

Copy code

```
http://localhost:3000
```
